PROFILE

Computer Engineering student specializing in **Full-Stack** development and **DevOps**: web application design, microservices architectures, containerized deployment and observability. Also interested in SAP technologies and consulting. Two industry internships and several projects in software development and Machine Learning. Seeking a **6-month final-year internship (PFE) starting January 2027**.

EDUCATION

National School of Applied Sciences (ENSA) – Tétouan **2022 – 2027**
- State Engineering Degree in Computer Engineering (expected 2027).

Baccalaureate in Physical Sciences and Chemistry, French option **2022**

PROFESSIONAL EXPERIENCE

Full-Stack Software Engineering Intern – HB Développement, Tétouan **July – August 2026**
Tech stack: Spring Boot, Spring Security, React, TypeScript, PostgreSQL, Tailwind CSS, n8n, Cron.
- Designed and developed end-to-end a web-based HRIS that digitalizes and automates the company's HR processes.
- Secured access (hybrid JWT, RBAC) and ensured leave traceability using the Ledger pattern.
- Deployed a BYOD QR-code attendance system with anomaly detection and document automation via n8n.

Software Engineering & DevOps Intern – NAJA7HOST, Tétouan **July – August 2025**
Tech stack: Laravel 12, RabbitMQ, Docker, Kubernetes, Argo CD, Prometheus, Grafana, Gemini API.
- Designed an e-commerce architecture of 6 microservices (Laravel 12, BFF pattern, RabbitMQ events).
- Integrated an AI chatbot (Google Gemini) with real-time access to business data.
- Set up full monitoring: Golden Signals in Grafana, Prometheus metrics and Loki logs.
- Secured the services (JWT, OWASP) and automated GitOps deployment on Kubernetes with Argo CD.

PROJECTS

AgileFlow – Agile Management Platform (Full-Stack) **June 2026**
Tech stack: Spring Boot, React/TS, MySQL, WebSockets, Material UI, iText PDF.
- Developed the complete back office (users, projects, audit logs) of a Jira-like SaaS platform.
- Designed an analytics module for KPI tracking with automatic PDF report generation and export.
- Built DiagramFlow, an interactive visual editor, as well as the responsive landing page.

SGITU – Securing a Microservices Architecture (Backend) **May 2026**
Tech stack: Java, Spring Boot, Spring Cloud Gateway, Spring Security, JWT, Redis, Kafka, PostgreSQL, Docker, Kubernetes, Prometheus, Grafana.
- Developed an authentication microservice with user, role and JWT token management.
- Designed an API Gateway securing and centralizing routing to nine microservices.
- Integrated Redis, Kafka, security testing and monitoring with Prometheus and Grafana.

Nutrition Risk Classifier – End-to-End ML Pipeline **April 2026**
Tech stack: Python, XGBoost, scikit-learn, FastAPI, Streamlit, Docker, MLOps.
- Built a complete ML pipeline (CRISP-DM methodology) to classify nutritional risks.
- Achieved a Recall of 0.94 with XGBoost, a model optimized for asymmetric error costs.
- Productionized the model (FastAPI REST API, Streamlit app) and packaged everything with Docker.

TECHNICAL SKILLS

- **Languages:** Python, Java, JavaScript, TypeScript, C, C#, PHP, Dart.
- **Back-end & architecture:** Spring Boot, Spring Security, Laravel, FastAPI, ASP.NET, REST API, JWT, WebSockets, RabbitMQ, microservices, pytest.
- **Front-end & mobile:** React, Angular, HTML5/CSS3, Tailwind CSS, Bootstrap, Flutter, JavaFX.
- **Databases:** MySQL, PostgreSQL, MongoDB, Oracle, Supabase.
- **DevOps & cloud native:** Docker, Docker Compose, Kubernetes, Argo CD (GitOps), GitHub Actions (CI/CD), Prometheus, Grafana, Loki, n8n, Git/GitHub, Linux.
- **AI & ML:** scikit-learn, XGBoost, pandas, NumPy, Streamlit, EDA, feature engineering.
- **Networking & design:** TCP/IP, DHCP, DNS, Sockets, UML.

CERTIFICATIONS & LANGUAGES

- **IBM** Applied DevOps Engineering 2026
- **IBM** Exploratory Data Analysis for ML 2026
- **SAP** Technology Consultant In progress
- **Languages:** Arabic (native), French (fluent), English (B2).
